Frontend Developer   01/2024 - Present

Weepingplebs
NFT webpage

- I have done extensive research and employed many resources to build a relevant, visually appealing website.
- Can accept property bookings with just a form fill-up; can list properties with details and pictures.
- Responsive design was put into place to ensure smooth browsing on desktops, tablets, and mobile.
- Improvement in the user experience and user engagement by 20% with the use of optimized design and functionality.

PROFESSIONAL EXPERIENCE

Web App Developer   01/2021 - 08/2021

Bokosh Ltd
E-commerce website

- Designed and created frontend pages per the design specifications using HTML, CSS, and JavaScript to ensure that it is pixel-perfect.
- Designed an extremely efficient cart system using RESTful api as the backend end point. Allowed the user to add items, confirm, and process payments, hence increasing the efficiency of checkout by 30%.

Frontend Developer   09/2021 - 05/2022

Zizzajune
Blog website

- Due to this fact, various researches were undertaken by me, as well as numerous resources exploited in order to make this website both catching and relevant.
- The site has a form in which the user can book their property by filling in the details accordingly. Properties enlisted on the site have various descriptions and images.
- Accessible, responsive, and functional interfaces guarantee that visitors, whether on desktop, tablet, mobile, or any other device, will have an utterly seamless experience while browsing properties or using site features.

Web App Developer   05/2022 - 06/2023

Space Tech Ltd
Space-tech (Blog)

- Utilized React for frontend development, incorporating CSS for styling.
- Implemented a backend admin panel for blog post management, utilizing Rest framework for frontend-backend connectivity.
- Hosted the project on Vercel, ensuring accessibility, responsiveness, and optimal user experiences.
